Bendong Tan

Department of Electrical and Computer Engineering Phone: 19592320448
University of Connecticut Email: bendong.tan@uconn.edu
Storrs, CT, USA Web: https://tbendong.github.io/

EDUCATION

- **University of Connecticut (Ph.D. candidate in Electrical Engineering)** Jan. 2022 – Now
  - **Research area:** Low-inertia power system identification, monitoring and control
  - **Supervisor:** Prof. Junbo Zhao
- **Mississippi State University (Ph.D. student in Electrical Engineering)** Aug. 2021 – Dec. 2021
  - **Research area:** Low-inertia power system identification, monitoring and control
  - **Supervisor:** Prof. Junbo Zhao
- **Wuhan University (M.S. in Electrical Engineering)** Sept. 2017 – May 2020
  - **Thesis:** Power System Transient Stability Assessment with Unsatisfactory Data
  - **Supervisor:** Prof. Yuanzhang Sun & Prof. Jun Yang
- **Wuhan University (B.E. in Electrical Engineering)** Sept. 2013 – July 2017
  - **Grade Point Average (GPA):** 3.60/4.00
  - **Ranking:** 22/379 **(top 6%)**
  - **Thesis:** Transient Stability Assessment of Power System Based on Data Mining Technology
  - **Supervisor:** Prof. Jun Yang

WORK EXPERIENCE

- **Teaching Assistant: University of Connecticut, USA** Sept. 2023 –Dec. 2023
  - Responsible for teaching usage of PSS/E, and grading assignments and exams.
- **Internship: National Renewable Energy Laboratory, USA** May 2023 – Aug. 2023
  - Responsible for developing online regional inertia monitoring techniques for WECC power system.

RESEARCH INTERESTS

- **Data-driven Uncertainty Quantification for Renewable Energy Systems Analysis**
- **Bayesian Load Modeling for Power System Dynamic Calibration**
- **Time-varying Inertia Estimation for Grid-Forming Inverter-based Resources and Regional System**
- **Data-driven Power System Stability Assessment**

AWARDS

- **Conference Participation Award** July 2023
  Awarded by the University of Connecticut
- **GE Fellowship for Excellence** May 2023
  Awarded by the University of Connecticut
- **IEEE Transactions on Power Systems Oustanding Reviewer** Mar. 2023
  Awarded by the IEEE Transactions on Power Systems Editorial Broad
- **Best Conference Paper Award** Aug. 2022
  Awarded by IEEE Conference on Innovative Smart Grid Technologies - Asia (ISGT Asia) for the paper "Interpretable data-driven probabilistic power system load margin assessment with uncertain renewable energy and load"
- **Best Conference Paper Award** July 2022
  Awarded by IEEE Power and Engineering Society General Meeting for the paper "Explainable Bayesian neural network for probabilistic transient stability analysis considering wind energy"
- **Best Journal Paper Award** June 2022
  Awarded by the International Journal of Electrical Power & Energy Systems for the paper "Power system inertia estimation: Review of methods and the impacts of converter-interfaced generations"
- **IEEE Transactions on Power Systems Oustanding Reviewer** Jan. 2022
  Awarded by the IEEE Transactions on Power Systems Editorial Broad
- **Power Exploration Scholarship(top 1%)** Sept. 2019
  Awarded by Wuhan University
- **First-class Undergraduate Scholarship of Wuhan University(top 5%)** Sept. 2016
  Awarded by Wuhan University
- **First-class Undergraduate Scholarship of Wuhan University(top 5%)** Sept. 2015
  Awarded by Wuhan University

SKILLS

- **Power System Softwares**
  - Skilled with with **DIgSILENT simulation language** for converter-interfaced generation modeling;
  - Proficient in using **PSS/E, PowerWorld** for dynamic power system simulation;
  - Experienced in **PST, PSASP, PSD-BPA** for dynamic power system simulation.
- **Programming Languages** – Proficient in using Python and Matlab Julia; Experienced in C, Julia.

SERVICES

- **Peer Reviewer**
  - IEEE Transactions on Power Systems
  - IEEE Transactions on Smart Grid
  - IEEE Power Engineering Letters
  - IEEE Open Access Journal of Power and Energy
  - International Journal of Electrical Power & Energy Systems
  - CSEE Journal of Power and Energy Systems
  - IET Generation, Transmission & Distribution
  - Journal of Modern Power Systems and Clean Energy
  - IEEE Transactions on Circuits and Systems II: Express Briefs
  - Electric Power Systems Research

PROJECTS

- **Probabilistic Power System Risk Assessment with Uncertain Renewable Generations and Loads**
  ISO New England Dec. 2022 – Nov. 2023
  Major contribution
  - Expedited assessment of the risk exposure of the ISO New England power system to massive contingencies;
  - Fast risk assessment of forced outages through transfer learning.
- **Load Sculptor: Robust Dynamic Load Modeling and Uncertainty Quantification**
  US Department of Energy and Lawrence Livermore National Laboratory June 2020 – Dec. 2023
  Major contribution
  - Filter out invalid simulations due to the unsuitable parameter combinations;
  - Global sensitivity analysis is developed to identify the sensitivity of each parameter;
  - Bayesian parameter estimation for the composite load model with distributed generation (CMPLDWG).
- **Modeling and Analytics for WI Near Term Resilience and Reliability**
  US Department of Energy and National Renewable Energy Laboratory Mar. 2021– Apr. 2022
  Major contribution
  - Uncertainty quantification from uncertain sources, i.e., wind generations and loads, to load margin;
  - Transfer learning-enabled model updating under topology changes.
- **Macro-Resiliency of the North American Power Grid**
  US Department of Energy and Argonne National Laboratory June 2020 – Dec. 2023
  Major contribution
  - Track the time-varying inertia in inverter-based resources (IBRs) with grid-forming control;
  - Effects from the current limiter are mitigated during inertia tracking.
